**We'll Make Your Computer Network Run Faster and With Fewer Problems While Lowering Your Overall IT Support Costs AND Securing Your Company's Critical Data...All Free...**

Karl Palachuk, President  
KPEnterprises Business  
Consulting, Inc.

## **But You Have To Hurry!**

Viruses, worms, spam, hackers, error messages, crashes, slow performance, and a never-ending stream of problems. If you've owned a computer for more than 10 minutes, you already know how frustrating and annoying these problems are.

And, if you are like most of the business owners we help, you probably don't have the in-house technical expertise to help you set them up properly and eliminate the "bad behavior" you currently experience.

## **That's why I'm writing to you today...**

My name is Karl Palachuk and I am the President of KPEnterprises Business Consulting, Inc. For more than 10 years now we have been helping small to mid size business owners like you eliminate common computer problems quickly and affordably so you can focus on doing what you do best: running your business.

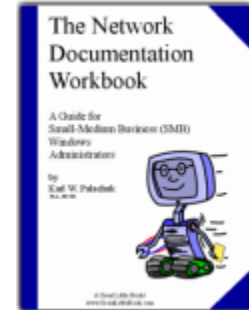

Although we have helped hundreds of businesses in the Sacramento area, we have not had the opportunity to work with you. Therefore, I'd like to offer you a 68-Point Problem Prevention Network Audit absolutely FREE (a \$500 Value).

## **Here Are Just A Few Of The Services We'll Perform For FREE:**

- Check your network configurations to make sure they are optimized for maximum speed, performance, and security.
- Scan for spyware, viruses, and other security threats lurking in the background that can slow down your network, cause it to crash, and even allow hackers to access your confidential information!
- Make sure your server is being backed up properly so you don't run the risk of losing valuable information and files to hardware failure, natural disasters such as fire or flood, or even to thieves and disgruntled employees!
- Provide a detailed written report on your health and security of your network.

## What's So Special About The Way We Support Business Networks?

Well, for starters, I literally “wrote the book” on network documentation and management for small and medium sized business. It's called the *Network Documentation Workbook* and it's now in its second printing.

Other computer consultants from around the world use the practices, procedures and forms we developed in this book, and it has become the standard for small business network support. As a matter of fact, I'm leaving to speak at conventions in Prague, Amsterdam, London, and New York on this very topic to over 500 computer consultants.

We're not miracle workers, but we're extremely good at what we do.

## Why Would We Give Away Such A Valuable Service For Free?

Some people think we are crazy for giving away free services. They say, “Aren't you afraid people will just take advantage of you?” The truth is, some people might – but we know that MOST business owners are just honest people trying to find someone they can trust to fix and maintain their computer network.

We know that once we get the opportunity to demonstrate how we can help you make your computer problems go away finally and forever, you're very likely to end up being a client for life, just like these clients:

"Our company competitively selected KPEnterprises to implement a Windows server network with a major government customer. KPEnterprises was selected because of their demonstrated ability over the previous years to deliver complex server integration services to our other customers. These services were delivered by KPEnterprises with the kind of cheerful technical competence that allows us to continue to depend upon KPEnterprises for many of our external system integration requirements."

George Hall, President/CEO  
G.E. Hall and Associates

"Our organization has been working with KPEnterprises for several years, and I couldn't be happier about our successful collaboration! These professionals really know their stuff and have been an enormous help to us. I have always received everything I need from them, and they are so congenial! It's a pleasure to work with them."

Dorothy Copenhaver  
The Bernard Partnership, Inc.

## **There Is One Tiny Catch...**

Due to staff and time limitations, I'm limited in the number of free audits I can give away. Therefore, I can only make 12 available at this time.

If you want to make sure your data is safe and secure from viruses, hackers, or theft, if you are concerned about the reliability of your network, or if you just want to find out how you can make your network run faster and with fewer "glitches," then I urge you to call or respond to this letter immediately.

I fully expect all 12 to be snatched up right away so please call our office or fax back the enclosed response form today while you're thinking about it.

Good networking,

Karl Palachuk  
President  
KPEnterprises Business Consulting, Inc.

P.S. If you are not ready for the Free Problem Prevention Audit, you'll at least want a copy of my report: "**The 5 Most Notorious (And Expensive) Mistakes Small Business Owners Make With Their Computer Network – And How To Avoid Them.**"

This report is written in plain English - not computer babble. It will show you how to make smart decisions that will save you thousands of dollars and hours of frustration when buying new equipment and software.

I'll send you a copy free of charge just for the asking or you can download a copy right from our web site: <http://www.kpenterprises.com/images/5MostExpensiveMistakes.pdf>

# 3 Ways To Secure Your FREE 68-Point Problem Prevention Network Audit:

1. Call my office direct and ask for Karl: 916-928-0888
2. Sign up online at: [www.kpenterprises.com/offer.htm](http://www.kpenterprises.com/offer.htm)
3. Complete and fax back this form.

**Please sign me up for a FREE 68-Point Problem Prevention Network Audit!** I understand that I am under no obligation to do or to buy anything. I also understand at no charge, you will come on site and:

- Make sure that your data is being backed up properly.
- Review you network configuration and printers to make sure you are getting the maximum performance and speed from these machines.
- Look for hidden viruses, spyware, and loopholes in your securities that could allow hackers and other cyber criminals to access your network.
- Make sure all security patches and updates are current and installed properly.
- Review your server file logs to look for looming problems or conflicts that can cause unexpected downtime.
