

SPAM Solutions

From **KPE**nterprises

How Badly Does Unwanted Email Affect Your Profits?

If you receive ten unwanted emails (SPAM) a day, that's probably not significant. If you receive hundreds, then it's annoying. If you receive thousands, then you're **losing money!**

If you have ten employees and they each spend 30 minutes a day dealing with SPAM, you're losing five hours a day. If you have twenty employees, you're losing ten hours a day. And so forth.

Over 90% of the email traffic on your server is SPAM! That means that your server isn't really your own: its resources are being used to regulate traffic instead of managing your business.

We can help!

KPEnterprises offers a great service for taking control of SPAM, which makes your staff more productive and let's your server get back to work, too! We use one solution for our own email, and for all of our clients.

Hosted Solution

We use and recommend **Reflexion** for spam filtering and email redundancy.

Reflexion is a service that filters all email and removes malicious attachments and spam before they reach your email server.

It has the added advantage that it will store all of your email in case your server is down for any reason. So, if the lights go out, your email won't "bounce."

What about the expensive thing you **heard about on the radio?** Well, to be honest, devices that filter spam can work very well. And we'll be happy to sell you one. Budget \$5,000 to \$10,000 to start. And that device won't help you when your internet connection is down temporarily — because it lives inside your office.

Reflexion is a service, so your email is stored for you and delivered when your Internet connection is available. So you won't "bounce" email when the Internet has a hiccup!

Price is \$6 per mailbox per month (5 mailbox minimum).
